

# Manufactured Housing

---

By Doug Ryan, Senior Director of Affordable Homeownership, Prosperity Now

**M**anufactured homes are an often overlooked and maligned component of our nation's housing stock, but these homes are an important source of housing for millions of Americans, especially those with low incomes and in rural areas. Although the physical quality of manufactured housing continues to progress, the basic delivery system of how these homes are sold, financed, and managed is still in need of improvement to ensure that they are a viable and quality source of affordable housing.

## ISSUE SUMMARY

There are approximately 6.7 million occupied manufactured homes in the U.S., comprising about 6% of the nation's housing stock. More than half of all manufactured homes are located in rural areas around the country. New manufactured housing accounts for about 9% of all new single-family housing starts. Although the demographics of manufactured housing are changing, lower-income households are still the primary residents of manufactured homes. Modern manufactured homes have their origins in the automobile and recreational travel trailer industry, but factory-built dwellings produced today are more comparable in quality and safety to conventionally constructed single-family homes. It is equally important to recognize the existing stock of older manufactured or mobile homes. An estimated one-fifth of currently occupied manufactured homes were built before 1980. These older units are likely to be smaller, less safe, and have fewer amenities and less investment potential than newer manufactured homes. The adoption of the HUD Code (see below) in 1976 and subsequent updates have significantly improved this housing type.

Affordability and convenience make manufactured homes a popular housing option. The average sales price of a new manufactured

home in 2017 was \$71,900 (excluding land costs); much less compared to an average of \$293,727 for a newly constructed single-family home and approximately \$184,647 for an existing site-built home (see the U.S. Census Bureau's *Manufactured Homes Survey* and *Characteristics of New Housing*, along with the National Association of Realtors' *Median Sales Price of Existing Homes*). Manufactured homes cost about half of what site-built homes cost per square foot, though transportation and onsite work slightly increase the final costs. Even though the purchase price of manufactured homes can be relatively affordable, financing them may not. The majority of manufactured homes are still financed with personal property, or Chattel loans (see the Consumer Financial Protection Bureau's *Manufactured Housing Consumer-Finance in the United States*). With shorter terms and higher interest rates, personal property loans are generally less beneficial for consumers than conventional mortgage financing. Chattel loans do, however, typically have lower closing costs and can close faster than conventional mortgages. Approximately 64% of manufactured home loans in 2016 were classified as high cost (having a substantially high interest rate) which is more than nine times the level of high cost lending for all homes nationally according to the Housing Assistance Council Tabulations of 2016 "Home Mortgage Disclosure Act" data. Some factors such as the low-dollar nature of Chattel loans do factor into their higher costs. Manufactured homes are typically sold at retail sales centers. In some cases, dealers resort to unscrupulous sales and financing tactics, trapping consumers into unaffordable loans (*The Mobile Home Trap: How a Warren Buffett Empire Preys on the Poor*).

A significant portion of manufactured and mobile homes are located in community or park settings, though this is becoming less common. According to the U.S. Census Bureau, in 2017, approximately 32% of new manufactured homes were sited in such settings. Estimates suggest

that approximately 40% of all manufactured homes are in an estimated 45,000 to 50,000 land lease communities. Though about three quarters of manufactured homes are owner-occupied, the sector has a history of being placed on rented land and therefore manufactured homes have a pattern of land tenure status that is unique to this form of housing. In manufactured home communities, many residents own their homes and rent the land, which can devalue the asset. Ownership of land is an important component to nearly every aspect of manufactured housing, ranging from quality to assets and wealth accumulation. Residents who do not have control over the land on which their home is placed often have reduced legal protections than other homeowners. Other common concerns faced by tenants of manufactured home communities include excessive rent increases, poor park management and maintenance, restrictive rules, and restricted access to municipal services. For these and other reasons, alternative park ownership models, such as resident, nonprofit, and government ownership are gaining traction.

## WHAT ADVOCATES SHOULD KNOW

### Federal Resources for Affordable Manufactured Housing

Manufactured housing is largely financed in the private marketplace. However, there are several existing federal resources that support the development, financing, and rehabilitation of affordable manufactured housing, such as HUD-HOME, USDA Rural Development, Veterans Affairs, and Weatherization funds. Fannie Mae and Freddie Mac are increasing their manufactured home loan offerings.

### High-Quality Manufactured Housing

Once shunned by nonprofit housing developers, manufactured homes are now seen as options for infill, new developments, and other settings. Much of this progress is attributable to a growing and innovative group of advocates who challenged assumptions and convention about developing and preserving manufactured housing. Across the nation, several organizations

and initiatives are utilizing manufactured homes to provide and maintain affordable housing. These efforts avoid the pitfalls of traditional dealer-based manufactured housing purchase and finance, and investor ownership of communities.

### The HUD Code

An important factor in the designation of a manufactured home is whether the unit was built before or after June 15, 1976. This date marked the implementation of the “Manufactured Home Construction and Safety Standards Act” (42 U.S.C. Sections 5401-5426) regulating the construction of manufactured homes and commonly referred to as the “HUD code.” HUD developed and administers the code that implements the statute. These federal standards regulate manufactured housing design and construction, strength and durability, transportability, fire resistance, and energy efficiency. The HUD code evolves over time and has undergone several major modifications since 1976. In 2018, HUD launched an effort to revise various regulations and other guidance governing the HUD Code.

## LEGISLATIVE AND REGULATORY ACTIONS

### Duty to Serve

The “Housing and Economic Recovery Act of 2008” mandates that Fannie Mae and Freddie Mac (the government sponsored enterprises, or GSEs) have a duty to serve underserved markets. Manufactured housing was identified in the act as one of three underserved markets along with rural areas and housing preservation. Under the act, the GSEs will increase mortgage investments and improve the distribution of capital available for mortgage financing in these markets. In 2016, the Federal Housing Finance Agency (FHFA) issued a final rule on the [duty to serve requirements](#). In a change from the initial and proposed rule, FHFA will now consider personal property or Chattel loans for duty to serve credit on a pilot basis. 2018 was the first year of Fannie Mae and Freddie Mac’s three- year underserved markets plans, which include serving both the

single-family and the community manufactured housing markets.

### **The “Economic Growth, Regulatory Relief, and Consumer Protection Act”**

In 2018, the president signed into law S. 2155, which includes a provision on manufactured home loans. The statute amends the “Truth in Lending Act” (TILA) to specify that a retailer of manufactured housing is generally not considered a mortgage originator. The provision was not supported by affordable housing advocates on the grounds that it lessens already weak consumer protections in the manufactured housing market.

### **The “Dodd-Frank Wall Street Reform and Consumer Protection Act” (PL 111-203)**

Enacted in 2010, Dodd-Frank revised TILA to establish specific protections for mortgage loans, origination activities, and high-cost lending. These provisions enhance consumer protections for purchasers of manufactured homes. Dodd-Frank also directs the newly created Bureau of Consumer Financial Protection to supervise manufactured housing finance activities. S. 2155 (above) modifies one provision of Dodd-Frank.

## **WHAT TO SAY TO LEGISLATORS**

Advocates should speak to lawmakers with the message that:

- Manufactured homeowners should be provided opportunities to obtain standard mortgage lending instead of personal property loans often used to finance this type of housing.
- Borrowers with personal property loans should be afforded consumer protections consistent with real property or standard mortgage loans.
- Legislation should be enacted that limits predatory lending practices involving manufactured homes.
- Policies and programs should be enacted to facilitate manufactured housing community preservation, such as protection from community sales, closures, and rent

increases. Residents should be properly notified and given first right of refusal on the sale of their community.

- Improved data collection for manufactured homes should be incorporated into publicly available data resources such as the “Home Mortgage Disclosure Act,” The American Community Survey, and the American Housing Survey. Manufactured home data should indicate property status (personal property or real property) and location information indicating whether the unit is located in a manufactured home community or on a scattered site lot. The inclusion of these updated and enhanced manufactured home data would provide a much more complete assessment of manufactured housing.
