

2010 OHIO
HOMELESSNESS
REPORT

Coalition on Homelessness
and Housing in Ohio
COHHIO

Year Three: A snapshot of
Ohio's homeless numbers during
a 24-hour period in 2010

LEAD AUTHOR

Erica Mulryan

Erica Mulryan joined COHHIO in August 2006 as the Housing and Services Coordinator. Previously, Erica worked as a policy associate with the Mid-America Institute on Poverty of Heartland Alliance for Human Needs and Human Rights, a service-based human rights organization in Chicago, where she coordinated their immigrant asset-building research project. Erica's professional and academic background has largely focused on anti-poverty research and policy analysis as well as issues involving violence against women. She earned her undergraduate degree in social work from Kansas State University and a Master's degree in Social Work (A.M.) from the School of Social Service Administration at the University of Chicago.

REPORT CONTRIBUTORS

Jonda Clemings

Jonda Clemings started as COHHIO's Rural Housing Program Coordinator in May 2007. Jonda came from Newark, Ohio where she previously worked as Housing Coordinator for Moundbuilders Guidance Center, a community mental health agency. Jonda participated and held leadership roles in Knox County's Emergency Needs Coalition and Licking County Housing Initiatives – Continuum of Care groups where her passion for rural housing and homelessness issues developed. Jonda also represented these communities as part of the Mental Health Housing Leadership Institute and Rural Homeless Initiative of Southeastern and Central Ohio. Jonda received her Bachelor of Arts degree from Ashland University and Master of Science in Education in Social Agency Counseling II from Dayton University. Jonda is a licensed social worker.

Paula Jenkins

As COHHIO's Homeless Management Information System (HMIS) coordinator, Paula Jenkins shares her knowledge of database technology with agencies gaining access to the Ohio-Balance-of-State HMIS. Through comprehensive trainings, she helps participating agencies enter data and establish standards for data quality. In addition, Paula assists with HMIS data analysis and development of its policies and procedures. Her extensive knowledge of computer science stems from her customer service experience with AmeriCorps*VISTA, handling software application questions. Paula also worked as a project manager with CompuServe and a customer support engineer for Lucent Technologies. Paula earned a BS degree in Computer Science from Stevens Institute of Technology in Hoboken, New Jersey.

Genelle Denzin

Originally from Louisiana, Genelle moved to Columbus from Youngstown where she was working part-time managing the HMIS system for HPRP at Youngstown State University. Genelle has worked in information technology and database analysis for over ten years and uses her technical skills to help serve those who will benefit from HPRP legislation. In her spare time, Genelle has participated with various grassroots community organizing projects dealing with issues like human rights, government accountability, independent media, and environmental issues.

EXECUTIVE SUMMARY

This document presents the findings from the third annual statewide count of homeless persons in Ohio. Primarily utilizing 2010 Point-in-Time Count data, this report offers an analysis of changes in homeless numbers over three years in Ohio. All data represent numbers of people experiencing homelessness during a 24-hour period on January 26, 2010.

Key findings:

- 12,407 Ohioans were homeless on a single night in 2010, 2.4% less than in 2009 and 3.2% less than 2008
- 10,576 homeless Ohioans were in shelters or transitional housing in 2010, 3.5% less than in 2009, but 2.4% more than 2008
- 1,831 Ohioans were on the street in 2010, 5% more than in 2009, but 26.6% less than in 2008
- Family homelessness decreased 1.9% between 2008 and 2009 and another 1.7% between 2009 and 2010
- Individual homelessness declined 2.8% from 2009, and decreased 24.3% from 2008

The timing of the 2010 Ohio Homelessness Report is significant because it comes in the midst of the worst recession since the Great Depression. The very slight decline in total homelessness and insignificant change in family homelessness specifically, point to the likelihood that the recession is negatively impacting our most vulnerable citizens, and in some cases, may even be leading to homelessness. Although the downward trends in homelessness statewide should not be discounted, when considered in light of new, extensive homelessness prevention and re-housing resources, these slight decreases seem to only be telling part of the story.

As we continue to tangle with the current economic crisis and attempt to implement national and state policies that may make a positive impact, it will be imperative that we keep concerns about our most vulnerable citizens at the forefront. New resources, like the Homelessness Prevention and Rapid Re-Housing Program (HPRP), have helped ensure that homelessness in Ohio hasn't worsened, but it will be important that we ensure ongoing access to such resources in the future, so that Ohio communities can get back on the track of reducing homelessness for everyone.

INTRODUCTION

With the 2010 Ohio Homelessness Report, we now have three years of data on homelessness in individual Ohio communities and across the state. Collectively these data can begin to help us to discern trends and patterns in homeless numbers statewide and at community levels. Moreover, after three years of conducting aligned Point-in-Time (PIT) counts and producing this report, Ohio communities are participating in homeless counts in greater numbers than ever seen and appear to be submitting the highest quality data to date. We must caution, however, that a fundamental flaw will always exist in these data even as the quality in collecting them grows. That is, the numbers are strict and static, reflecting only those homeless people who can be seen and counted on a single night of the year.

Limitations noted, this report provides an overview of statewide 2010 Point-in-Time (PIT) Count data on as well comparisons to 2009 data, and discussion of any discernable trends over the three years of the report and statewide PIT counts. Although each section will only provide data for the nine Ohio Continua of Care (CoCs), county-level data is available in the appendices.

FINDINGS

Total Homeless

On one night in 2010, 12,407 Ohioans were homeless. With 12,708⁺ persons homeless in 2009, the 2010 data represent the second year of declines in total homelessness in Ohio – a 2.4% decline between 2009 and 2010 and a 0.8% decline between 2008 and 2009. Although the decreases are small, they still represent a slight downward trend in homelessness.

The greatest decreases in total homelessness were reported in the Cincinnati/Hamilton County Continuum of Care (CoC), with 10.6% fewer homeless than in 2009, and the Balance of State CoC with a 4.5% decrease. In contrast, Akron/Barberton/Summit County CoC showed a 4.9% increase over 2009's homeless numbers. Canton/Massillon/Alliance/Stark County CoC and Youngstown/Mahoning County CoC saw the largest decreases between 2008 and 2010, with 54.5% and 22.5% decreases, respectively; but while Youngstown/Mahoning County CoC's decrease held between 2009 and 2010, Canton/Massillon/Alliance Stark County CoC had a slight 3.7% increase between 2009 and 2010. The Toledo/Lucas County CoC and the Balance of State CoC experienced the largest increases in homelessness between 2008 and 2010 (25% and 12.3%).

**12,407
Ohioans
were
homeless
on a single
night in
2010.**

At the CoC level, communities experienced unique changes in homeless numbers over the past three years. Canton/Massillon/Alliance/Stark County CoC, for example, reported a decrease between 2008 and 2009, only to have their homeless numbers grow again in 2010. Other CoCs experienced patterns of increasing or decreasing homelessness. In particular, Akron/Barberton/Summit County CoC, Columbus/Franklin County CoC, and Toledo/Lucas County CoC all reported increases in homelessness every year between 2008 and 2010. Cleveland/Cuyahoga County CoC, Dayton/Kettering/Montgomery County CoC, Cincinnati/Hamilton County CoC, and Youngstown/Mahoning County CoC each experienced three years of decreases in total homelessness. Interestingly, the Balance of State CoC was the only one to report a decrease in homelessness between 2009 and 2010, but an increase between 2008 and 2009.

⁺ Select data presented in the 2009 Ohio Homelessness Report were revised following the report release. The data throughout this report reflect those changes.

TOTAL HOMELESS BY CONTINUUM OF CARE					
	Total Homeless 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008
Akron/Barberton/Summit County CoC	839	39	4.9%	105	14.3%
Canton/Massillon/Alliance/ Stark County CoC	417	15	3.7%	-500	-54.5%

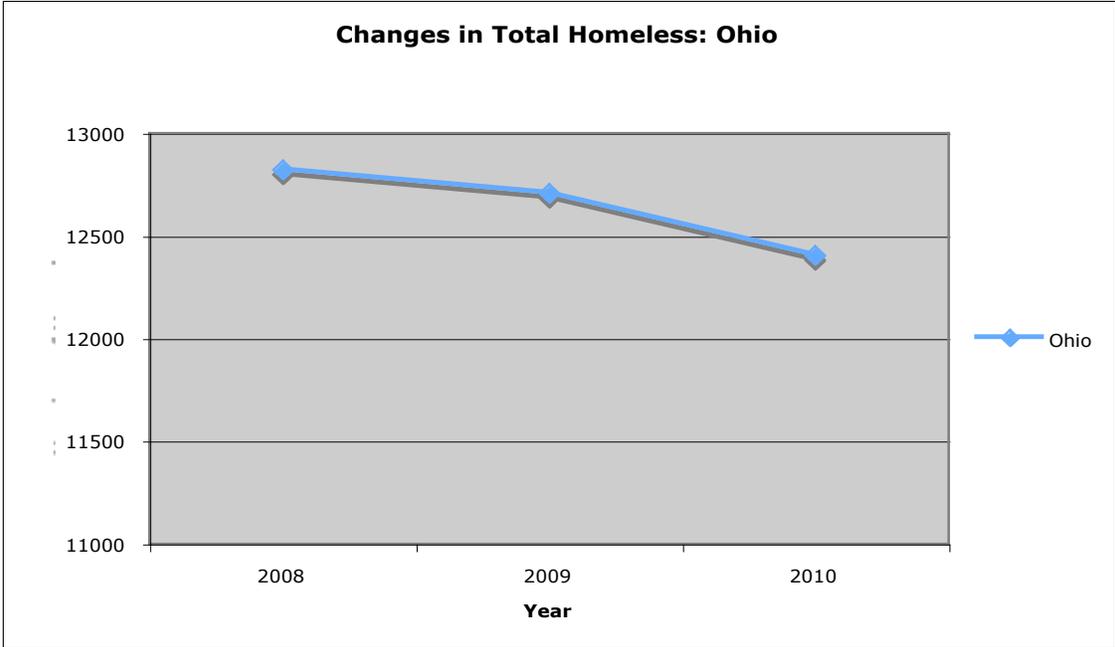

Figure 3: Changes in Total Homeless: Ohio

Sheltered Homeless

In 2010, 10,576 of Ohio's total homeless population were sheltered homeless, residing in emergency shelters and/or transitional housing programs. The 2010 numbers represent a 3.5% decrease from 2009's sheltered homeless but a slight (2.4%) increase over those of 2008. Overall, Ohio's sheltered homeless numbers have not changed significantly over the past three years.

**10,576
homeless were
in shelters or
transitional
housing.**

Aligning with patterns for total homelessness, Cincinnati/Hamilton County CoC, Cleveland/Cuyahoga County CoC, Dayton/Kettering/Montgomery County CoC, and Youngstown/Mahoning County CoC all experienced annual declines in sheltered homeless for the past three years. Akron/Barberton/Summit County CoC and Toledo/Lucas County CoC both reported increases each year. Only Columbus/Franklin County CoC and the Balance of State CoC reported increases between 2008 and 2009, but decreases between 2009 and 2010.

SHELTERED HOMELESS BY CONTINUUM OF CARE					
	Sheltered Homeless 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008
Akron/Barberton/Summit County CoC	661	3	0.5%	56	9.3%
Canton/Massillon/Alliance/Stark County CoC	364	39	12.0%	-40	-9.9%
Cincinnati/Hamilton County CoC	933	-160	-14.6%	-145	-13.5%
Cleveland/Cuyahoga County CoC	2049	-56	-2.7%	-72	-3.4%
Columbus/Franklin County CoC	1253	-19	-1.5%	29	2.4%
Dayton/Kettering/Montgomery County CoC	831	-16	-1.9%	-23	-2.7%
Toledo/Lucas County CoC	844	117	16.1%	253	42.8%
Youngstown/Mahoning County CoC	179	-1	-0.6%	-46	-20.4%
Balance of State CoC	3462	-296	-7.8%	237	7.3%
TOTAL	10576	-144	-3.5%	249	2.4%

Table 2: Sheltered Homeless by Continuum of Care

Unsheltered Homeless

In contrast to the sheltered homeless numbers, Ohio communities saw a 5% increase in unsheltered homeless persons in 2010, with a total of 1,831 unsheltered on one night. However, this was still a very large decrease from 2008; 663 fewer persons were counted as unsheltered in 2010, a decrease statewide of 26%.

**1,831 persons
were on the
streets on
one night in
2010.**

Although the majority of CoCs reported increased unsheltered homeless in 2010, only Akron/Barberton/Summit County CoC experienced an increase both years. In contrast, Youngstown/Mahoning County CoC and Canton/Massillon/Alliance/Stark County CoC reported annual declines in unsheltered homelessness between 2008 and 2010. The vast majority of CoCs saw unsheltered homelessness decrease between 2008 and 2009, but increase between 2009 and 2010. And for some of these communities, namely Cincinnati/Hamilton County CoC, Columbus/Franklin County CoC, and Dayton/Kettering/Montgomery County CoC, the recent increases wiped out the previous years' decline.

UNSHELTERED HOMELESS BY CONTINUUM OF CARE					
	Unsheltered Homeless 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008

Table 3: Unsheltered Homeless by Continuum of Care

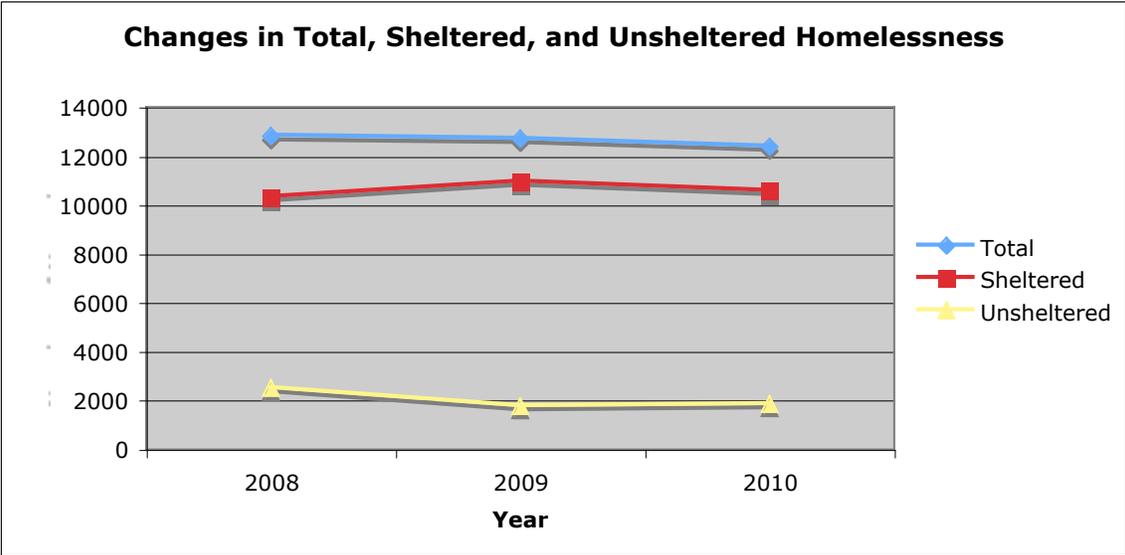

Figure 4: Changes in Total, Sheltered, and Unsheltered Homelessness

Family Homelessness

In 2010, Ohio reported 4,813 persons in families experiencing homelessness during the PIT count. This represents a 1.7% decrease from 2009 numbers, and a decrease of 3.6% from 2008.

Akron/Barberton/Summit County CoC and the Balance of State CoC reported increases in family homelessness both in 2009 and 2010, while Canton/Massillon/Alliance/Stark County CoC, Cincinnati/Hamilton County CoC, Dayton/Kettering/Montgomery County, and Youngstown/Mahoning County CoC reported decreases both years. As in years past, the Balance of State CoC had the largest proportion of homeless in families (55%), with Youngstown/Mahoning County CoC and Canton/Massillon/Alliance/Stark not far behind with family homelessness making up 43% and 41% of their total homeless, respectively. Cleveland/Cuyahoga County CoC and Cincinnati/Hamilton County CoC, at 21% and 30%, had the smallest proportions of family homelessness. Columbus/Franklin County CoC reported an increase in 2010 family homelessness, in contrast to a decrease the previous year, but the recent upswing was less than the previous year's decline, resulting in an overall drop in family homeless numbers between 2008 and 2010 of approximately 10%.

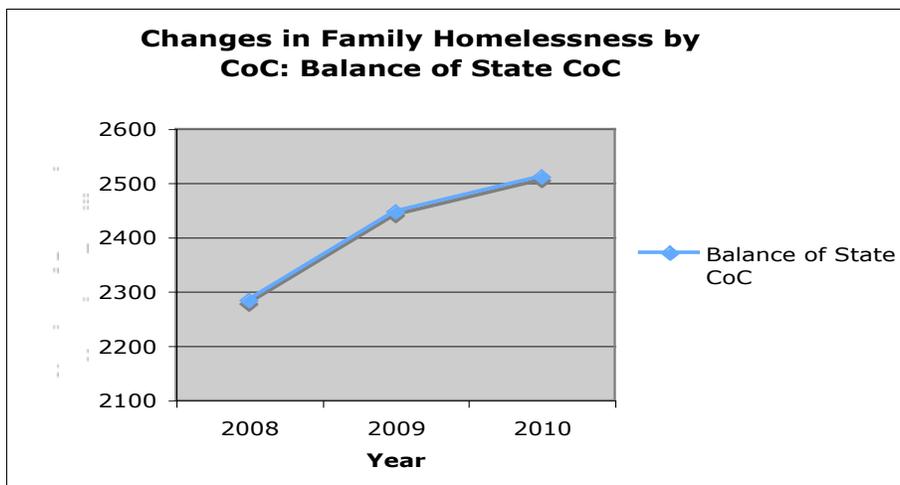

Figure 6: Changes in Family Homelessness by CoC: Balance of State CoC

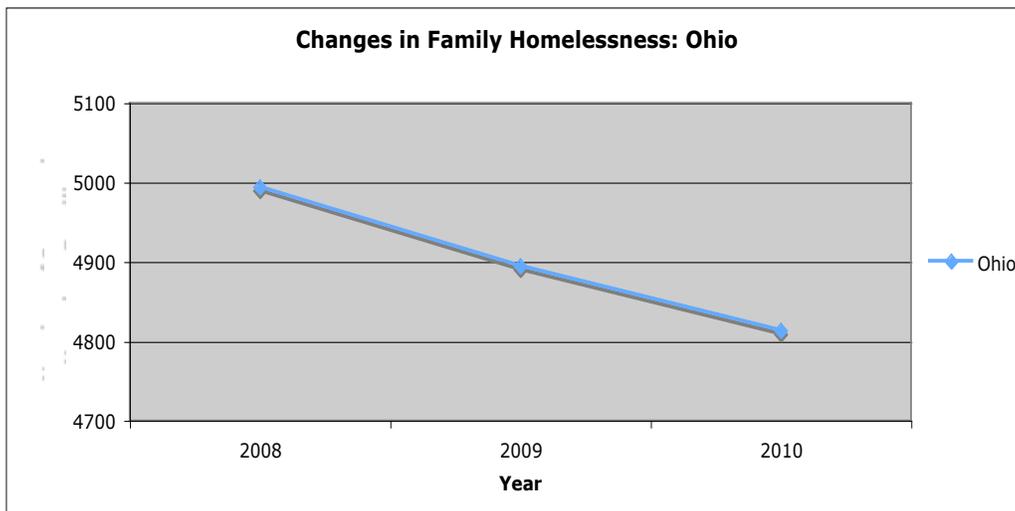

Figure 7: Changes in Family Homelessness: Ohio

Individual Homelessness

On one night in 2010, 7,594 individuals experienced homelessness in Ohio. This is a 2.8% decrease from 2009's individual homeless numbers, and a drastic 24.4% decline from 2008. The greatest decreases in individual homelessness occurred in the Balance of State CoC, which reported a 12% decrease, and Cincinnati/Hamilton County CoC, which had a 7.7% decrease. Additionally, both of these communities experienced decreases in individual homelessness between 2008 and 2010; an 8.8% decrease for the Balance of State CoC and a 4.4% decrease for Cincinnati/Hamilton County CoC.

7,594 individuals experienced homelessness on a single night in 2010.

Akron/Barberton/Summit County CoC, Dayton/Kettering/Montgomery County CoC, and Toledo/Lucas County CoC experienced three years of increasing individual homelessness. Akron/Barberton/Summit County CoC reported a 14.8% increase between 2008 and 2010 and Dayton/Kettering/Montgomery County CoC had a 13.7% increase. The remaining CoCs reported varying levels of increases and decreases over the three years.

INDIVIDUAL HOMELESSNESS BY CONTINUUM OF CARE					
	Individual Homelessness 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008

Table 5: Individual Homelessness by Continuum of Care

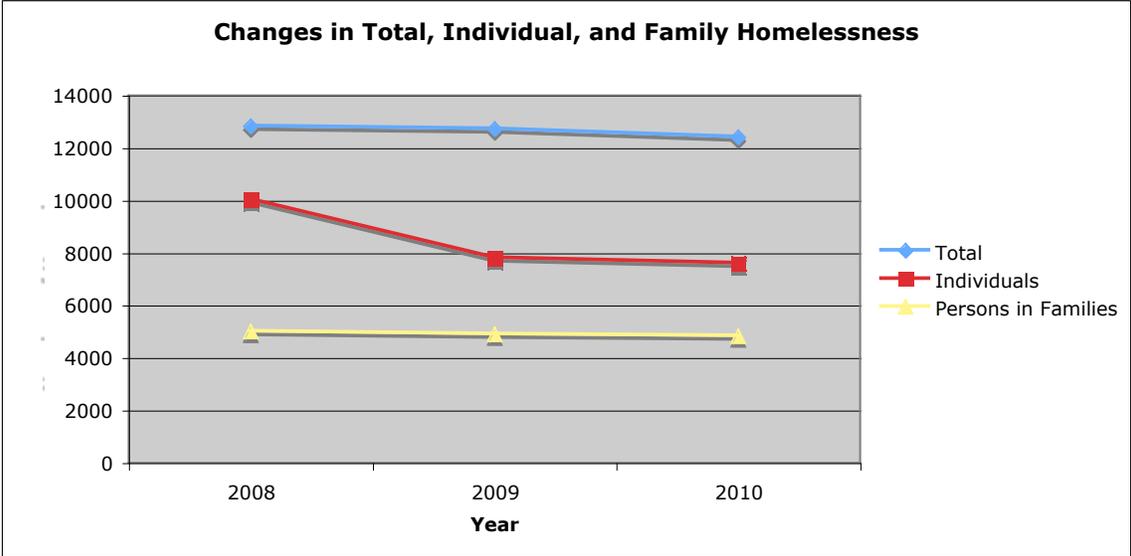

Figure 8: Changes in Total, Individual, and Family Homelessness

HOMELESS SUBPOPULATIONS

Chronically Homeless

2,161 persons in Ohio were chronically homeless on one night in 2010. Chronically homeless persons are unaccompanied, disabled individuals who have been homeless for one continuous year or on at least four occasions in the past three years. In Ohio, Cleveland/Cuyahoga County CoC and the Cincinnati/Hamilton County CoC had the largest proportion of chronically homeless persons, making up 29.4% and 30% of their total homeless populations, respectively. Cincinnati/Hamilton County CoC's chronically homeless proportion remained static between 2009 and 2010, although they had a slight increase over 2008 when they reported 24% of the

17% of the homeless population was chronically homeless.

total homeless population as chronically homeless. Cleveland/Cuyahoga County CoC experienced a slight increase in chronically homeless in 2010 as well, but the current percentage of chronically homeless persons is still slightly smaller than that of 2008. As a whole, the state's chronically homeless numbers decreased an insignificant 1.2% from 2009, but decreased 11.1% from 2008.

Over the past several years the U.S. Department of Housing and Urban Development (HUD) has placed an emphasis on expanding homeless services programming, particularly permanent supportive housing (PSH) targeted to chronically homeless persons. Given the significant decrease in chronic homelessness between 2008 and 2010, it seems likely that these efforts have had a positive impact in Ohio.

CHRONICALLY HOMELESS BY CONTINUUM OF CARE					
	Chronically Homeless 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008
Akron/Barberton/Summit County CoC	156	55	54.5%	-27	-14.8%
Canton/Massillon/Alliance/Stark County CoC	17	-38	-69.1%	-102	-85.7%
Cincinnati/Hamilton County CoC	303	35	13.1%	34	12.6%
Cleveland/Cuyahoga County CoC	642	58	9.9%	-56	-8.0%
Columbus/Franklin County CoC	276	5	1.9%	-174	-38.7%
Dayton/Kettering/Montgomery County CoC	83	31	59.6%	9	12.2%
Toledo/Lucas County CoC	242	-70	-22.4%	-3	-1.2%
Youngstown/Mahoning County CoC	13	6	85.7%	-16	-55.2%
Balance of State CoC	429	-108	-20.1%	65	17.9%
TOTAL	2161	-26	-1.2%	-270	-11.1%

Table 6: Chronic Homelessness by Continuum of Care

Homeless with Severe Mental Illness

In 2010, 1,968 persons who were homeless in Ohio were identified as having severe mental illness (SMI). This subpopulation makes up 15.9% of Ohio's total homeless population and 18.6% of the sheltered homeless population. Since subpopulation information, except on chronic homelessness, is only collected for sheltered homeless, the 18.6% proportion of sheltered homeless with SMI is a more accurate reflection of the prevalence of this subpopulation.

**1,968
homeless
persons
had severe
mental
illness.**

The 2010 estimates of homeless with SMI represent a slight decline from 2009 (-1.6%) and a slightly larger decline from 2008 (-2.6%). The largest decreases occurred in Akron/Barberton/Summit County CoC (25.7% and 57.7% decreases) and the Toledo/Lucas County CoC (45.2% and 51.4% decreases). Dayton/Kettering/Montgomery County CoC reported an increase in homeless with SMI of 121.4% over 2009 and 79.7% over 2008. Youngstown/Mahoning County CoC also reported large increases, but their small numbers overall skew the percentage increases.

In general, it appears that Ohio is experiencing a slight downward trend in numbers of homeless with SMI. Similar to recent declines in numbers of chronic homelessness, it seems likely that the decreases in SMI numbers are, in part, a reflection of Ohio service providers' success in continuing to develop permanent supportive housing units, which are largely targeted to homeless individuals and families with disabilities and long-term homelessness.

SEVERELY MENTALLY ILL					
	Severely Mentally Ill 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008

TOTAL	1968	-32	-1.6%	-53	-2.6%

Table 7: Severely Mentally Ill

Homeless with Chronic Substance Abuse Issues

23% of Ohio's homeless population had chronic substance abuse issues.

In 2010, 2,870 homeless persons were identified as having chronic substance abuse issues during the PIT count, representing 23% of the overall homeless population and 27% of the sheltered homeless population. Statewide, this is a 3.3% decrease from 2009 and a 9.4% decrease from 2008. Six of nine Ohio CoCs reported decreases in these numbers between 2009 and 2010, while seven CoCs experienced decreases between 2008 and 2010. The largest decreases were reported in the Toledo/Lucas County CoC (20.3% and 32.2% decreases) and Youngstown/Mahoning County CoC (26.7% and 58.2% decreases). Dayton/Kettering/Montgomery County CoC was the only one to report increases in chronic substance abusers between 2008 and 2010, with a 90.3% increase over 2008 numbers and a 148.3% increase over 2009.

CHRONIC SUBSTANCE ABUSERS					
	Chronic Substance Abusers 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008

TOTAL	2870	-99	-3.3%	-297	-9.4%

Table 8: Chronic Substance Abusers

Homeless Veterans

In 2010, Ohio CoC's reported an overall 2.1% decrease in the number of homeless veterans; **967 veterans were homeless on one night in 2010**. This represents about 7% of the total homeless population, and 9% of total sheltered homeless. The largest decreases in homeless veterans were reported in Columbus/Franklin County CoC, which experienced a 38% decrease in their numbers between 2009 and 2010. However, they had a 5% increase in reported homeless veterans between 2008 and 2009. Akron/Barberton/Summit County CoC saw the largest increases in veterans' homelessness between 2008 and 2010; they reported a 96% increase between 2009 and 2010 and a 276.9% increase between 2008 and 2010.

Although these may seem like large increases and decreases in reported homeless veterans numbers, it should be noted that until recently little emphasis was placed on conducting accurate counts of homeless veterans. As a result, CoC's have tended to report homeless veterans numbers of varying quality. Beginning in 2008 though, the federal government, including the White House and the Department of Veterans Affairs, began to focus more on addressing veteran homelessness. This included expanding the Veterans Affairs Supportive Housing (VASH) program and providing 10,000 additional vouchers for homeless veterans in 2009, for a total of 20,000 nationally, as well as improving work related to accurate counts of homeless veterans¹.

Table 9: Veterans

Homeless Persons with HIV/AIDS

94 homeless persons reported being HIV positive on a single night in 2010.

In the 2010 PIT Count, Ohio communities reported 94 homeless persons with HIV/AIDS. This is a slight 5.1% decrease from 2009 and a lesser decrease (-2.1%) from 2008. These numbers of persons with HIV/AIDS represent a minimal 0.8% of the total homeless population, and only 0.9% of sheltered homeless.

The data on homeless persons with HIV/AIDS reported here should be regarded with caution. HIV status is reported on a voluntary basis, which likely greatly reduces the numbers, and communities are still struggling to improve their counting methods.

PERSONS WITH HIV/AIDS					
	Persons with HIV/AIDS 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008

Table 10: Persons with HIV/AIDS

Homeless Victims of Domestic Violence

1,290 homeless persons, or 10% of the total homeless population, were identified as victims of domestic violence (DV) on one night in 2010. This is virtually unchanged from 2009, and represents only a slight increase from 2008 estimates. CoC's statewide reported widely differing trends in local numbers of DV victims. For example, Cleveland/Cuyahoga County CoC indicated a 25.5% decrease in DV victims between 2009 and 2010, while Canton/Massillon/Alliance/Stark County CoC reported a 58.3% increase. Only Toledo/Lucas County CoC and the Balance of State CoC reported increases in DV numbers for each year of the statewide PIT counts. All other CoCs experienced various increases and decreases in their DV numbers.

1,290 people were homeless as a result of fleeing domestic violence in 2010.

VICTIMS OF DOMESTIC VIOLENCE					
	Victims of DV 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008
Akron/Barberton/Summit County CoC	102	2	2.0%	-97	-48.7%

Table 11: Victims of Domestic Violence

Homeless Unaccompanied Youth

**48
unaccompanied
youth were in
shelters or on
the streets on a
single night in
2010.**

Decreasing 42.9% from 2009, 48 unaccompanied youth were homeless on one night in 2010. This is a decrease of 80.8% from 2008. These numbers also represent a decline in the proportion of the statewide homeless population who were unaccompanied youth from 1% in 2009 to about 0.4% in 2010. The largest numbers of homeless unaccompanied youth were reported in the Columbus/Franklin County CoC and the Youngstown/Mahoning County CoC, both of which reported 9 homeless youth. Canton/Massillon/Alliance/Stark County CoC and Toledo/Lucas County CoC each reported no unaccompanied homeless youth. In 2008, both of these CoC's had no unaccompanied youth (Canton/Massillon/Alliance/Stark County CoC) or very small reported numbers (Two youth in Toledo/Lucas County CoC).

The data on unaccompanied homeless youth should be deemed very limited, at best. Communities continue to have significant difficulties accurately counting this population, and experts in the field believe these numbers to be a severe undercount.

UNACCOMPANIED YOUTH					
	Unaccompanied Youth 2010	Change from 2009	Percent Change from 2009	Change from 2008	Percent Change from 2008

Table 12: Unaccompanied Youth

DATA SOURCES

As with previous *Ohio Homelessness Reports*, current Point-in-Time (PIT) counts provided the vast majority of data on local homelessness. Homeless Management Information Systems (HMIS) and Housing Inventory Charts (HIC) were used to conduct data quality checks on submitted PIT count numbers as needed. Lastly, for a small number of communities within the Balance of State CoC that did not conduct PIT counts in 2010, HIC and HMIS data were used to provide PIT estimates of sheltered homeless.

Point-in-Time Counts of Homeless

In 2003, the U.S. Department of Housing and Urban Development (HUD) began requiring regularly occurring counts of sheltered and unsheltered homeless persons for those Continua of Care (CoCs) applying for McKinney-Vento funding through the Continuum of Care (CoC) application processⁱⁱ. Specifically, HUD mandated that CoCs produce statistically reliable, unduplicated counts or estimates of homeless persons in sheltered and unsheltered locations at a one-day point in timeⁱⁱⁱ. These counts must be conducted at least every two years during the last ten days of January. Generally, this process of counting homeless persons for a one-day period is called a *Point-in-Time (PIT) count*.

Ohio CoC's conducted the first aligned statewide PIT count in January 2008. Statewide counts were conducted again in 2009 and 2010, with greater participation from rural communities every year.

There are several data collection methods communities use for their PIT counts. The methods chosen often vary by community size, available resources, previously identified local homeless population characteristics, and volunteer capacity. Following are the most commonly utilized methods in the Ohio PIT Count 2010.

For unsheltered homeless

- Street Count/Public Places Count
- Service-Based Screening/Interview
- Some combination of both methods

For sheltered homeless

- HMIS data
- Homeless Service Provider Surveys
- Some combination of both methods

Ohio Point-In-Time Count 2010 participants collected basic data on unsheltered and sheltered homeless persons, as mandated by HUD, including^{iv}:

For unsheltered homeless

- Number of adults, children, and unaccompanied youth who are unsheltered
- Number of adults and unaccompanied youth who meet the definition of chronic homelessness

For sheltered homeless

- Number of adults, children, and unaccompanied youth in emergency shelters and transitional housing
- Number of adults and children considered to be: chronically homeless, seriously mentally ill, chronic substance abusers, veterans, persons with HIV/AIDS, victims of domestic violence, and unaccompanied youth

It should be noted that individuals/families living in doubled-up situations (with other households) or who are precariously housed, meaning they are at risk of losing housing soon, **are not counted as homeless** in PIT counts. Households in these situations are not currently considered homeless by HUD for purposes of these counts. Although some communities may collect this data and report it locally, it is not included in this report.

Homeless Management Information Systems Data

CoCs and providers receiving homeless assistance funding through HUD or the Ohio Department of Development are mandated to enter individual-level information on persons who utilize their services into a Homeless Management Information System (HMIS)⁹. COHHIO pulled HMIS data for 1/26/10 for emergency shelters and transitional housing providers in BOSCOB counties that did not conduct PIT counts in 2010. This provided numbers of persons and households in shelters and transitional housing programs in those counties, but did not provide any unsheltered data or subpopulations information (chronic homeless, unaccompanied youth, SMI, chronic substance abuser, veterans, DV). For 2010, BOSCOB HMIS data was only used for four counties.

Housing Inventory Charts

As part of the Continuum of Care application for federal funding, HUD requires that communities conduct annual inventories of emergency shelter, transitional housing, safe haven, rapid re-housing, and permanent housing units/beds targeted to homeless persons. COHHIO compared PIT count data against Housing Inventory Chart (HIC) information for BOSCOB communities to ensure consistency in reported numbers. In addition, three counties in the Balance of State CoC submitted neither PIT count data nor utilized HMIS for submission as part of this report. HIC information was used to estimate numbers of sheltered homeless for these communities.

METHODOLOGY

All urban CoCs and Balance of State CoC communities submitted 2010 PIT count data to COHHIO via an online survey tool. The data was then compiled and COHHIO conducted data quality checks on all CoCs' reported numbers. This included comparing 2010 PIT numbers to previous years numbers, reviewing the organizations for which data was submitted, comparing sheltered numbers to HMIS data for the same date, and comparing sheltered numbers to numbers of beds and utilization rates listed in current Housing Inventory Charts. For those communities that did not submit PIT count data, COHHIO utilized available HMIS data or HIC information to provide sheltered homeless estimates. Once data was corrected and any irregularities explained COHHIO began simple analysis of the numbers – calculating state totals, proportions, and changes from 2008, 2009, and 2010.

LIMITATIONS AND DISCUSSION

General Limitations

Given that PIT counts were the primary data source for this report, it should be noted that there are significant limitations inherent in these counts. The most noted and significant general limitations of PIT counts are:

- Difficulty finding unsheltered homeless people
- Potential for duplication
- Numerous, uncontrollable factors (e.g. weather, number of volunteers) that impact the numbers of homeless persons identified
- Definitional issues
- Varied overall quality of count methods

There are challenges in using HMIS and Housing Inventory Charts as well, even when used in a data quality check capacity. These limitations are largely related to errors that accompany data entry at the program and community levels.

2010 Changes and Challenges

Over the past three years, Ohio CoC's have continued to improve their PIT count data quality, thus improving the overall quality and accuracy of the Ohio Homelessness Report. Additionally, the BOSCOG has greatly improved community participation in the Ohio PIT Count since 2008. In 2010, only seven communities failed to submit local PIT count data, down from eight in 2009 and 18 in 2008. COHHIO expects this BOSCOG PIT count non-participation level to, at minimum, hold steady, but possibly decrease further in future years.

Large snowstorms blanketed communities across the state in 2009, contributing that year to a 30% decline in unsheltered homeless numbers. During the 2010 Ohio PIT Count, however, Ohio CoCs experienced relatively mild winter weather and reported a 5% increase in unsheltered counts. Better weather may have contributed to a slightly more accurate count overall as well, as volunteers and staff are more likely to follow through on PIT count commitments when the weather complies.

The overarching challenge for all Ohio CoCs is to consistently conduct quality PIT counts that provide communities with accurate pictures of local homelessness. After three years of conducting aligned statewide PIT counts, and making continued improvements to the process and methods, it seems that work is still needed. Significant fluctuations in numbers of unsheltered homeless and individual homelessness point to the need for higher quality counts in particular. For example, some Ohio CoCs reported one-year decreases in unsheltered homeless from 31% (Canton/Massillon/Alliance/Stark County CoC) to 40% (Toledo/Lucas County CoC), while others indicated increases between 25% (Akron/Barberton/Summit County CoC) and 114% (Cincinnati/Hamilton County CoC). The numbers of homeless individuals decreased in 2010 by 12% for the BOSCOG, but increased 20% in Youngstown/Mahoning County CoC.

However, annual fluctuations and community-level variance aside, the leveling off of total homelessness and family homelessness statewide are cause for some concern. In the 2009 Ohio Homeless Report we noted that homelessness is generally considered a lagging indicator, meaning that factors that contribute to homelessness affect data only after a certain period of time has passed. Although there was a slight (-3%) decline in total homelessness between 2008 and 2009, we warned that communities should be prepared for a shift in trends^{vi}. According to 2010 PIT count data, this prediction may be ringing true. As outlined previously, total homelessness statewide decreased a mere 2.4% between 2009 and 2010, and, most concerning, family homelessness only decreased by 1.6%.

Key findings from the 2010 Ohio PIT Count:

- The total number of homeless decreased a slight 2.4%, with 12,407 persons homeless in 2010
 - However, Akron/Barberton/Summit County CoC and Canton/Massillon/Alliance/Stark County CoC reported increases of 4.9% and 3.7%, respectively
 - Homeless subpopulations numbers remained virtually unchanged
- The number of persons in homeless families with children decreased an insignificant 1.6% in 2010
 - Youngstown/Mahoning County CoC and Dayton/Kettering/Montgomery County CoC reported the largest decreases, around 20%
 - Columbus/Franklin County CoC and Akron/Barberton/Summit County CoC reported increases of 12.9% and 11.5%, respectively
- Individual homelessness decreased 2.8%
 - Youngstown/Mahoning County CoC and Dayton/Kettering/Montgomery County CoC reported the largest increases, 20.9% and 12.3%, respectively
 - The Balance of State CoC experienced the largest decrease, 12%

CONCLUSION

Statewide, the total number of homeless decreased slightly in 2010, with 12,407 persons homeless. Similarly, numbers of homeless individuals decreased only slightly, by 2.8%. Unfortunately, the numbers of persons in families who were homeless was virtually unchanged, with a 1.6% decrease.

With the *2010 Ohio Homelessness Report*, we now have three years of data on homelessness in individual Ohio communities and across the state. This year is critical because it marks the first time that we are able to attempt to discern trends and patterns in homeless numbers statewide. Moreover, after three years of conducting aligned PIT counts and producing this report, Ohio communities are participating in homeless counts in greater numbers than ever seen and appear to be submitting the highest quality data to date.

The timing of this report, and the statewide PIT counts, is also significant because it comes in the midst of the worst recession since the Great Depression. Although homelessness is generally considered a lagging indicator, enough time has passed since the economic crisis began in late 2007^{vii} that we now anticipate being able to see any impact of the recession on homelessness. The very slight decline in total homelessness and insignificant change in family homelessness specifically, point to the likelihood that the recession is negatively impacting our most vulnerable citizens, and in some cases, may even be leading to homelessness. Although the downward trends in homelessness statewide should not be discounted, when considered in light of new, extensive homelessness prevention and re-housing resources, these slight decreases seem to only be telling part of the story.

Signed into law in February 2009 as part of the response to the economic crisis, the American Recovery and Reinvestment Act (ARRA) provided \$1.5 billion in funding to create the national Homelessness and Rapid Re-Housing Program (HRRP). This program was included in ARRA, in part, to allay growing concerns that homelessness would increase as poverty and unemployment rates grew. Ohio HRRP programs began operating in fall of 2009, and focused their efforts on preventing homelessness and helping those currently homeless to be quickly re-housed and stabilized. As a whole, Ohio received over \$65 million in HRRP funds to be spent within three years.^{viii} Early reports from select Ohio communities initially showed that HRRP seemed to be keeping any rise in family homelessness at bay. In fact, family homeless numbers in a handful of communities during a three-month time period in fall 2009 largely showed decreases from the same time period the previous year^{ix}. Although this decline is reflected in the statewide PIT count numbers of homeless families as well, it is disappointing that the decrease between 2009 and 2010, the years in which HRRP was implemented, is actually slightly less than between 2008 and 2009 (-2%).

Based on current economic conditions, improved PIT counting methods, and the availability of HRRP resources in 2010, we would argue that more families and individuals are likely facing homelessness now than in the previous year. However, HRRP is helping to address some of the need and, more specifically, is helping to keep Ohio's homeless numbers from drastically increasing. Had these resources not been available to Ohio communities in 2010, we believe CoC's would have seen increases in total homelessness and family homelessness.

As we continue to tangle with the current economic crisis and attempt to implement national and state policies that may make a positive impact, it will be imperative that we keep concerns about our most vulnerable citizens at the forefront. New resources, like HRRP, have helped ensure that that homelessness in Ohio hasn't gotten worse, but it will be important that we ensure ongoing access to such resources in the future, so that Ohio communities can get back on the track of reducing homelessness for everyone.

APPENDIX A

Definitions

Following are some key terms and definitions used throughout this report. Every effort was made to ensure that common definitions were used in all data collection work.

Chronically Homeless: An unaccompanied homeless individual with a disabling condition who has been continuously homeless for a year or more, or has had at least four episodes of homelessness in the past three years.¹

Continuum of Care: A community plan to organize and deliver housing and services to meet the specific needs of people who are homeless as they move to stable housing and maximum self-sufficiency. It includes action steps to end homelessness and prevent a return to homelessness.

▪ In Ohio there are eight HUD-recognized Continuua of Care (CoC), as follows:

- Akron/Barberton/Summit County CoC
- Canton/Massillon/Alliance Stark County CoC
- Cincinnati/Hamilton County CoC
- Cleveland/Cuyahoga County Coc
- Columbus/Franklin County CoC
- Dayton/Montgomery County CoC
- Toledo/Lucas County CoC
- Youngstown/Mahoning County CoC
- Balance of State CoC
 - This CoC is comprised of the remaining 80 counties that are not a part of any other recognized CoC. Generally, these are the most rural areas of the state.

Emergency shelter: Any facility the primary purpose of which is to provide temporary or transitional shelter for the homeless in general or for specific populations of the homeless.²

Family/Persons in Families: A household with at least one adult and one child, or a person in a household with at least one adult and one child.³

Homeless: A person sleeping in a place not meant for human habitation (e.g., living on the streets, in a car, or abandoned building) OR living in a shelter for homeless persons including an emergency shelter, transitional housing, domestic violence shelter, residential programs for runaway/homeless youth, or any hotel/motel voucher arrangement paid for by a public/private agency because the person is homeless.⁴

- An individual who is homeless is considered “unsheltered” if they live in one of the places not meant for human habitation described above
- An individual who is homeless is considered “sheltered” if they reside in one of the shelters, programs, or voucher arrangements mentioned above

APPENDIX A *Continued*

Individuals: Single adults, unaccompanied youth, persons in multi-adult households, and persons in multi-child households. A multi-adult household is a household composed of adults only – no children are present. A multi-child household is composed of children only (e.g., parenting youth) – no adults are present.⁵

Unaccompanied Youth: An individual under 18 years of age, living in a sheltered homeless situation, and not accompanied by an adult.⁶
